

Dear Hiring Manager,

I am excited to apply for the AI Intern position at Lockheed Martin. As a first-year Computer Science student at Drexel University, I had the privilege of meeting your representatives at the Drexel CCI Career Fair, where I gained valuable insights into Lockheed Martin's cutting-edge AI initiatives and commitment to innovation. This interaction reinforced my passion for contributing to impactful technologies in the aerospace and defense industry.

With a solid foundation in programming languages such as Python, Java, and JavaScript, and hands-on experience in prompt engineering for generative AI, I have actively sought opportunities to solve real-world problems. During Drexel's Digital Development Program, I led the data science component of a team project to combat food insecurity, utilizing Python and HTML to design an interactive and analytical web solution. This experience strengthened my technical capabilities and underscored the importance of teamwork and innovation in addressing societal challenges.

In addition to technical expertise, my experience as captain of my swim team taught me valuable leadership and organizational skills. Leading a team of diverse individuals required clear communication, strategic planning, and the ability to motivate others toward achieving shared goals—qualities that I bring to any collaborative environment. My background also reflects a commitment to detail and adaptability, as demonstrated through managing swim lessons for students of various ages and creating customized lesson plans tailored to their unique needs.

I am particularly inspired by Lockheed Martin's integration of AI in advanced systems and its application to solving complex global challenges. I am eager to contribute my skills, leadership, and problem-solving abilities to support your mission while learning from a team of exceptional professionals.

Thank you for considering my application. I look forward to the opportunity to discuss how my background, skills, and aspirations align with the objectives of Lockheed Martin's AI team.

Sincerely,
Srinarayan Srikanth
