

Dear Lockheed Martin Hiring Team,

I am writing to express my enthusiastic interest in the Software Engineer opportunities for early career professionals and interns, as advertised under Job ID 696735BR. As a driven Computer Science sophomore at Drexel University with a passion for software design, development, and leadership, I am eager to contribute to Lockheed Martin's mission of purposeful innovation and solving complex challenges.

My academic background and practical experience align well with the qualifications you seek. I possess strong proficiency in key programming languages such as Python, Java, C++, and JavaScript, alongside hands-on experience with web technologies including HTML, CSS, and React. My project work, particularly the "AI-Powered Personal Coach," demonstrates my ability to engineer full-stack web applications using React and Tailwind CSS, and integrate AI models like Google Gemini. This project, which dynamically generates personalized workout plans, showcases my capacity for developing robust, user-centric software solutions.

Furthermore, my experience as an AI Product Intern at Neural Metrics involved conceptualizing and building an AI-driven intelligent code verification system, integrating with Jenkins, Gemini, AWS, and Docker. This role honed my skills in streamlining development and deployment processes, enhancing CI/CD pipeline efficiency, and ensuring high accuracy in AI model recommendations, all critical aspects of modern software development. My work with the ASlearn platform also highlights my ability to create interactive web applications and utilize AI/ML technologies like YOLOv5 for real-time inference, further demonstrating my versatility.

I am a flexible, motivated, and detail-focused individual who thrives in team-oriented environments and is capable of multi-tasking, qualities I believe are essential for success at Lockheed Martin. The prospect of applying my skills to build "generation-after-next technology" and contribute to making the planet safer deeply resonates with my aspirations.

I am available for the virtual interview on August 26, 2025, and look forward to the opportunity to discuss how my skills and passion can benefit Lockheed Martin. Thank you for your time and consideration.

Sincerely,
Srinarayan Srikanth
