

Dear Hiring Manager,

I am excited to apply for the Technology/Product, Innovation & Development Internship at ETS. As a first-year Computer Science student at Drexel University with a passion for technological innovation and problem-solving, I am eager to contribute to ETS's mission of advancing educational equity and excellence through cutting-edge solutions.

My technical foundation includes programming languages such as Python, Java, and JavaScript, as well as experience in AI and data science. During Drexel's Digital Development Program, I led the data science efforts in creating a web-based platform to address food insecurity, applying my skills to analyze data and design actionable insights. This experience not only enhanced my technical expertise but also demonstrated the value of collaboration and innovation in tackling complex challenges—values I admire in ETS's approach to education.

As captain of my high school swim team, I developed leadership, communication, and organizational skills that complement my technical background. Balancing team dynamics, setting shared goals, and executing strategies have taught me the importance of aligning innovation with practical outcomes—a mindset I am eager to bring to the dynamic environment at ETS.

What excites me most about this opportunity is the chance to contribute to ETS's transformative work in education through technology. Your focus on leveraging technology to enhance learning outcomes aligns with my desire to create meaningful solutions that positively impact society. I am particularly drawn to ETS's emphasis on innovation in assessment tools and digital learning platforms, and I am eager to contribute my skills to these initiatives.

Thank you for considering my application. I would welcome the opportunity to discuss how my background and aspirations align with ETS's goals for this internship.

Sincerely,
Srinarayan Srikanth
