# Srinarayan Srikanth

Princeton, NJ — Philadelphia, PA

609-721-4494 Srinarayan.Srikanth@gmail.com LinkedIn Portfolio GitHub HackerRank

## Education

**Drexel University** **Estimated Graduation: June 2028**

*B.S. Computer Science, Minor in Finance* *Philadelphia, PA*

– A.J. Drexel Scholarship Recipient; Dean's List

## Experience

**Comcast Corporation** **Sept. 2025 – Present**

*AI Strategy, Development & Transformation Co-op* *Philadelphia, PA*

– Built a RAG-based multi-agent simulation platform that lets Comcast executives model and stress-test strategic business decisions, grounding agent reasoning in company data retrieved from Azure Cosmos DB via an internal LLM gateway.

– Integrated Azure Cognitive Services sentiment analysis into the agent pipeline to enrich retrieved context and improve decision-support output quality.

– Coordinated with multiple engineering teams to implement Azure AD (Entra ID) SSO via OAuth2/OIDC, securing the platform's access to sensitive enterprise data.

– Built the TypeScript/React frontend and deployed the platform on Azure App Service; presented the system to executives and teams across all levels of technical background, leading demos, user group testing, and UAT ahead of rollout.

**NeuralMetrics** **July 2025 – Aug. 2025**

*AI Product Intern* *Chennai, India*

– Developed AI-driven intelligent code verification system integrated with Bitbucket & Jira, reducing manual review effort by 50%.

– Built scalable FastAPI backend and AI-powered PDF extraction tool using OpenCV, Tesseract, Regex, PyMuPDF, LayoutParser.

– Streamlined CI/CD with Jenkins, Docker, and AWS (Bedrock, ECS, Lambda, EC2).

– Implemented AI Ops logging framework for monitoring model performance and anomaly detection.

## Projects

**Personal AI Agent Orchestration System** **2025 – Present Passion Project**

*Tech Stack: Python, Claude Agent SDK, MCP, intfloat/E5, JSON Schema, Cron*

– Built a multi-agent system with a router agent that classifies tasks and dispatches to sub-agents (ETL, transcription, summarization, memory management) via a shared JSON-schema-validated data layer, deployed as unattended cron-scheduled jobs.

– Implemented a RAG pipeline over a 294-document corpus using intfloat/E5 embeddings and cosine-similarity retrieval, improving context relevance ˜37% over keyword lookup.

– Wrote custom MCP servers in Python wrapping the WHOOP and Strava REST APIs into typed tool calls for any MCP-compatible agent.

**Quantitative Market-Making Backtester with Live Paper Trading** **2026 Passion Project**

*Tech Stack: C++, Python, pybind11, Alpaca API, pandas, scipy, SQLite, Black-Scholes*

– Backtests strategies against historical tick data using the C++ event loop — simulating order fills, modeling transaction costs and slippage, and enforcing strict no-lookahead rules so every decision uses only data available at that timestamp. Walk-forward cross-validation splits data into rolling train/test windows to confirm the strategy generalizes beyond the sample it was built on.

– Built a system that acts as a market maker — continuously quoting bid and ask prices around a fair value estimate and earning the spread. The order book and event loop are written in C++ and exposed to Python via pybind11, running significantly faster per-tick than an equivalent pure-Python implementation.

– Validated strategies deploy unchanged to Alpaca's paper trading API — same logic, real market data, simulated fills — reporting Sharpe ratio, max drawdown, and VaR; extended with Black-Scholes options pricing, Greeks, and a delta-hedging simulation.

## Certifications

**Microsoft** – Azure AI Essentials Professional Certificate
**IIT (Mar 2024–Mar 2025)** – Full Stack Web Development
**LinkedIn Learning** – Prompt Engineering, JIRA, Agile Software Development, Foundations in AI
**DeepLearning.AI** – AI with Python
**HackerRank** – Java, Python, React.js, CSS, Frontend Developer, Software Engineer, Problem Solving

## Technical Skills

**Languages & Frameworks**: Python, Java, C++, SQL, JavaScript/TypeScript, React, Angular, Flask, FastAPI, Supabase, Firebase, REST API
**Cloud & AI/ML**: AWS (Bedrock, Lambda, ECS, EC2), Azure (AI Foundry, Cosmos DB), PyTorch, YOLOvX, OpenCV, NLP, Gemini, OpenAI, Llama
**AI Agents**: Claude Agent SDK, MCP, RAG, intfloat/E5 Embeddings, JSON Schema, Cron
**Tools & Other**: VS Code, Jenkins, Docker, Final Cut Pro X, FAA-Certified Drone Pilot

## American National Team Swimmer

Captain - PTAC Swim Club; won 20+ gold medals at state and regional meets. (2016–2024)
