Summary

Computer Science student (Finance minor) who translates AI capabilities into business impact — presenting a RAG-based multi-agent platform to Comcast's C-suite, running UAT across executive and cross-functional user groups, and evaluating AI startups and partnerships. Comfortable bridging technical and business teams across the U.S. and India.

Education

Drexel University **Estimated Graduation: June 2028**
B.S. Computer Science, Minor in Finance *Philadelphia, PA*
– A.J. Drexel Scholarship Recipient; Dean's List

Experience

Comcast Corporation **Sept. 2025 – Present**
AI Strategy, Development & Transformation Co-op *Philadelphia, PA*
– Engineered a RAG-based multi-agent AI simulation platform to accelerate strategic decision-making, presenting capabilities directly to C-suite executives to drive enterprise-wide innovation and explore new ideas.
– Led user acceptance testing (UAT) with executives and cross-functional business units, presenting live demos to audiences ranging from C-suite leaders to engineering teams and tailoring technical depth to each group's background to streamline adoption.
– Spearheaded research into agentic commerce and emerging enterprise AI trends, representing the AI Strategy Development and Implementation team at industry conferences to benchmark external innovations.
– Evaluated AI startups and partnerships to support go-to-market strategies, prototyping and demoing new technologies for potential deployment within the company's broader ecosystem.

NeuralMetrics **July 2025 – Aug. 2025**
AI Product Intern *Chennai, India*
– Developed AI-driven intelligent code verification system integrated with Bitbucket & Jira, reducing manual review effort by 50%.
– Built scalable FastAPI backend and AI-powered PDF extraction tool using OpenCV, Tesseract, Regex, PyMuPDF, LayoutParser.
– Streamlined CI/CD with Jenkins, Docker, and AWS (Bedrock, ECS, Lambda, EC2).
– Implemented AI Ops logging framework for monitoring model performance and anomaly detection.

Projects

Personal AI Agent Orchestration System **2025 – Present Passion Project**
Tech Stack: Claude Agent SDK, MCP, Python, Obsidian
– Built a multi-agent system where a router agent assigns tasks to sub-agents for ETL, transcription, summarization, and memory management, running fully automated on a set schedule with no manual input.
– Built a RAG pipeline over a 294-document personal knowledge base, improving retrieval accuracy ˜37% over keyword lookup for agent context.

Quantitative Market-Making Backtester with Live Paper Trading **2026 Passion Project**
Tech Stack: Python, C++, Alpaca API, Black-Scholes
– Designed a market-making engine quoting both sides of the order book — widening spreads under volatility and skewing quotes to revert inventory risk — validated on rolling out-of-sample windows; achieved positive risk-adjusted returns (Sharpe ratio, max drawdown, VaR).
– Extended with Black-Scholes options pricing and a delta-hedging module, unifying equities and options under the same inventory risk framework; wired to Alpaca's live paper trading API for real-time simulated execution.

Certifications

Microsoft – Azure AI Essentials Professional Certificate
IIT (Mar 2024–Mar 2025) – Full Stack Web Development
LinkedIn Learning – Prompt Engineering, JIRA, Agile Software Development, Foundations in AI
DeepLearning.AI – AI with Python
HackerRank – Java, Python, React.js, CSS, Frontend Developer, Software Engineer, Problem Solving

Technical Skills

Languages & Frameworks: Python, Java, SQL, JavaScript/TypeScript, React, Flask, FastAPI, Supabase, Firebase
Cloud & AI/ML: AWS (Bedrock, Lambda, ECS), Azure (AI Foundry), PyTorch, OpenCV, NLP, Gemini, OpenAI, Llama
AI Agents: Claude Agent SDK, MCP, RAG, intfloat/E5 Embeddings, JSON Schema, Cron
Other: Final Cut Pro X, FAA-Certified Drone Pilot

American National Team Swimmer

Captain - PTAC Swim Club; won 20+ gold medals at state and regional meets. (2016–2024)
